

DEVASHISH TYAGI

Full Stack Developer | Software Engineer

India • +91 9557423119 • iamdevashishtyagi@gmail.com • github.com/iamdevashishtyagi

SUMMARY

Full-stack engineer with 1.5+ years building and operating production software across frontend, backend, databases, and applied AI. Experience spans enterprise systems used by multiple organizations, multi-tenant SaaS architecture, international compliance automation, and retrieval-augmented AI platforms. Comfortable owning features end-to-end — from ambiguous requirements through deployment, production debugging, and long-term maintenance — while collaborating directly with international stakeholders.

PROFESSIONAL EXPERIENCE

APERP Technologies — *Full Stack Developer* Feb 2025 – Present

- **Enterprise College ERP:** Own development of a multi-year production platform spanning admissions, academic records, attendance, examinations, fees, and role-based access, used concurrently across multiple institutions.
- **Database performance:** Diagnosed MongoDB slowdowns in attendance and reporting workflows under concurrent load by auditing real query patterns, then resolved them with targeted compound indexing and aggregation-pipeline optimization — eliminating a recurring class of timeout failures.
- **Security:** Designed and shipped a scoped administrative-impersonation system using short-lived signed tokens, explicit permissions, and audit logging, replacing password-sharing for support and debugging workflows.
- **E-invoicing automation:** Built deterministic conversion and schema-validation pipelines (XML/XSD) between international electronic invoicing formats — FatturaPA, UBL, Factur-X, CII — cutting manual processing and compliance errors for international clients.
- **AI / RAG platform:** Architected a tenant-isolated retrieval-augmented generation pipeline — document chunking, embedding generation, vector-based semantic search, and OpenAI-driven response generation — engineered to prevent cross-tenant data leakage.
- **Multi-tenant SaaS:** Built a gym-management SaaS (Vue.js, Pinia, Node.js, Express, MongoDB, TypeScript) covering membership, attendance, subscription billing, and owner-facing analytics dashboards.
- **Ownership & collaboration:** Partnered directly with international stakeholders to translate ambiguous business requirements into technical specs; mentored interns on the ERP codebase and reviewed code for correctness and maintainability.
- **Infrastructure:** Deployed and maintained services on AWS (S3, SES), Vercel, and Render with Docker-based CI/CD, debugging issues across frontend, API, database, and infrastructure layers.

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, PHP
Frontend	React, Vue.js, Next.js, Tailwind CSS, Pinia, Component Architecture, SSR/SSG
Backend	Node.js, Express.js, REST API Design, Authentication & Authorization, Middleware
Databases	MongoDB, Mongoose, Redis, Data Modeling, Indexing, Aggregation Pipelines, Query Optimization
AI & Data	OpenAI API, RAG, Embeddings, Vector Search, Semantic Retrieval, Prompt Engineering
Cloud & Tools	AWS S3, AWS SES, Vercel, Render, Docker, Git, GitHub, Bitbucket, CI/CD, Jest
Engineering	System Design, Production Debugging, Performance Optimization, Schema Validation, Code Review

EDUCATION

B.Tech, Computer Science & Engineering (Data Science) — *RD Engineering College* 2025
